

Summary

The “background” Property

background-image
background-color
background-position
background-size
background-origin
background-clip
background-repeat
background-attachment

Gradients

- Linear and radial gradients
- Linear gradients: Direction + color stops
- Radial gradients: shape, size, position and color stops

The “background” Shorthand

- Watch out for background-position and background-size (center/cover)
- As all shorthands: Overwrites other properties

Multiple Backgrounds

- You can stack background images (only one solid color which has to be at the bottom)
- Using transparency can create cool effects

Filters

- Easily add visual effects to boxes
- Affect all content

 vs background-image

- is better for accessibility but way more difficult to style
- background-image can be sized and positioned easier
